## Appeal Decision

Inquiry opened on 24 July 2018

Site visit made on 31 July 2018

**by David Wildsmith BSc(Hons) MSc CEng MICE FCIHT MRTPI**

**an Inspector appointed by the Secretary of State**

**Decision date: 4<sup>th</sup> September 2018**

---

**Appeal Ref: APP/X0415/W/18/3202026**

**Land to the rear of the Old Red Lion, High Street, Great Missenden, HP16 0AU**

- The appeal is made under section 78 of the Town and Country Planning Act 1990 against a refusal to grant planning permission.
  - The appeal is made by PGMI (Great Missenden) Ltd against the decision of Chiltern District Council.
  - The application Ref CH/2017/1943/FA, dated 18 October 2017, was refused by notice dated 6 April 2018.
  - The development proposed is described on the application form as 'Demolition of 3 4-bed houses, a disused industrial building (Use Class B2) and 20 garages, removal of spoil and trees from the rear of the site. Development of 34 residential dwellings comprising 25 houses and 5 flats, with associated landscaping, tree replacement, car parking and internal shared surface road. Change of use of the upper storeys of the Old Red Lion (62 High Street) from office to residential to provide 4 flats. Ground floor building line amendment to southern elevation of the Old Red Lion (62 High Street) to remove 700mm at ground floor only, to provide improved visibility onto the High Street. Amendments to Forge Cottage on Missenden Mews to relocate front door, relocate car parking space and provision of new private amenity space within the site'.
  - The inquiry sat for 5 days on 24 to 27 July, and 1 August 2018.
- 

### Decision

1. The appeal is allowed and planning permission is granted for demolition of 3 4-bed houses, a disused industrial building (Use Class B2) and 20 garages, removal of spoil and trees from the rear of the site; development of 34 residential dwellings comprising 25 houses and 5 flats, with associated landscaping, tree replacement, car parking and internal shared surface road; change of use of the upper storeys of the Old Red Lion (62 High Street) from office to residential to provide 4 flats; ground floor building line amendment to southern elevation of the Old Red Lion to remove 700mm at ground floor only, to provide improved visibility onto the High Street; amendments to Forge Cottage on Missenden Mews to relocate front door, relocate car parking space and provision of new private amenity space within the site, on land to the rear of the Old Red Lion, High Street, Great Missenden, HP16 0AU, in accordance with the terms of the application, Ref CH/2017/1943/FA, dated 18 October 2017, subject to the conditions set out in the attached Schedule.

### Application for costs

2. At the Inquiry an application for costs was made by PGMI (Great Missenden) Ltd (the appellant) against Chiltern District Council (the Council). This application is the subject of a separate Decision.

### **Preliminary matters**

3. Some of the application and appeal documentation was submitted in the name of PGMI (Missenden) Ltd rather than PGMI (Great Missenden) Ltd, but both main parties were content for the appeal to proceed in this latter name. I am satisfied that no-one with an interest in this case would be adversely prejudiced by this, and have therefore determined the appeal on this basis.
4. A similar proposal by the appellant for a development of 45 residential dwellings on this site was refused planning permission by the Council in June 2017, and had been scheduled for an inquiry<sup>1</sup>. However, the appellant withdrew that appeal in order to pursue the appeal into the current proposal for 34 residential dwellings.
5. After the close of the inquiry, but in accordance with an agreed timetable, the appellant submitted a planning obligation in the form of a unilateral undertaking (UU), made under Section 106 (S106) of the Town and Country Planning Act 1990, as amended. I have had regard to this UU in reaching my decision.
6. The Council refused planning permission for 6 reasons as set out in the Statement of Common Ground<sup>2</sup> (SOCG). However, after reviewing the 'fall-back' position detailed in the appellant's transport evidence (see later), Buckinghamshire County Council (BCC), as local highway authority, advised the Council shortly before the opening of the inquiry that it no longer considered there to be any basis to uphold those reasons for refusal which dealt with concerns regarding access to the site. As a result, the Council made it clear in its opening submissions to the inquiry<sup>3</sup> that reasons for refusal 3 and 4 were not being pursued.
7. In addition, although not formally withdrawing reason for refusal 5 (parking provision), and reason for refusal 6 (waste collection), the Council did not strongly defend either of them at the inquiry. In the case of reason for refusal 5 this was as a result of evidence presented at the inquiry and subsequent concessions made by the Council; whilst in the case of reason for refusal 6, it was as a result of the appellant's evidence and the submission of the aforementioned UU. I deal with these matters in more detail later in this decision.
8. On the first day of the Inquiry the Government published its revised National Planning Policy Framework<sup>4</sup> (NPPF). Therefore, unless noted otherwise, references to the NPPF throughout this decision relate to this revised, 2018 document. The Planning Practice Guidance (PPG), initially published in March 2014 and last updated in July 2018, is also relevant to this appeal.

### **Site description, surrounding area and details of the appeal proposal**

9. The appeal site lies within the existing settlement of Great Missenden and sits within both the Great Missenden Conservation Area and the Chilterns Area of Outstanding Natural Beauty (AONB). It comprises some 0.9 hectares (ha) to the west of High Street and is bounded by the Great Missenden Railway Station car park to the west and the grade II listed Baptist Church to the north. To the south there is vacant land, known as 1 Twitchell Road, which now has an extant planning permission for 6 dwellings<sup>5</sup>. The eastern boundary is lined with a mix of residential and retail/commercial buildings (several of which are listed) which front

---

<sup>1</sup> Planning application Ref CH/2017/0171/FA; Appeal Ref APP/X0415/W/17/3190919

<sup>2</sup> Document (Doc) 24

<sup>3</sup> Doc 2

<sup>4</sup> Doc 32

<sup>5</sup> Reference CH/2015/1417/FA

onto the High Street. Buildings along High Street are generally of 2 storeys, with ground floor retail/commercial uses and residential above.

10. The site rises noticeably from east to west, and currently contains 3 derelict 4-bed houses; a disused industrial building (Use Class B2); 20 garages; a group of maisonettes and Forge Cottage accessed from Missenden Mews; and 2 existing buildings fronting the High Street - the Old Red Lion (62 High Street) and 76 High Street. As such, much of the site constitutes previously developed land as defined in the NPPF. At the time of my visit large areas of the site were laid to rough grass, with many trees scattered across the site and particularly on the northern, western and southern boundaries.
11. The site has 3 existing pedestrian and vehicle access points onto the High Street. The northern access passes between Nos 50 and 48, providing pedestrian access to the appeal site and vehicular access to the rear of Nos 48 and 50. The main access lies to the south of the Old Red Lion, passing between this building and the grade II listed 64 High Street. It is used by vehicles and pedestrians going to and from the Class B1 office building (not part of the appeal site) which lies to the rear of No 64; the parking areas for the Old Red Lion and the TSB Bank which lie to the rear of these properties; as well as to the 3 vacant residential properties, the vacant Class B2 warehouse building, and a row of unoccupied garages. The southern access serves the residential Missenden Mews, Forge Cottage and a number of garages associated with these properties.
12. Under the appeal proposal the existing buildings on the site (excluding the Old Red Lion and Forge Cottage) would be demolished, and would be replaced with a total of 25 houses and 5 flats, with a further 4 flats being provided in the upper floors of the Old Red Lion. Most of the new dwellings would be sited close to the site's western boundary, although the block of 5 flats, together with some under-croft parking, would be sited just to the west of the existing parking area for the Old Red Lion. A total of 51 parking spaces would be provided on the site, for residents and visitors, including 1 space retained for the Old Red Lion ground floor unit, which would be unaffected by the appeal proposal.
13. The northern access would only provide a pedestrian route to and from the proposed development. The Old Red Lion access would be widened to improve inter-visibility between pedestrians and drivers, and the internal roads would be designed to allow for 2-way traffic immediately to the rear of the Old Red Lion building. This would be the primary vehicle access into the site, as at present. Missenden Mews would be retained in its existing form but extended into the site and on-site turning would be provided for the benefit of new and existing residents. There would be an emergency link, controlled by bollards, between Missenden Mews and the main internal site roads.
14. It is relevant to note that the Council has identified the appeal site (excluding the Old Red Lion) as suitable for housing development in its Draft Housing and Economic Land Availability Assessment<sup>6</sup> (HELAA), published in May 2017. A Disclaimer explains that the Draft HELAA does not represent policy and will not determine whether a site should be granted planning permission. Rather, it establishes a 'pool' from which sites can be tested on their potential suitability, availability and achievability, and is being used to inform the preparation of the emerging Chiltern and South Bucks Local Plan (CSBLP). The site<sup>7</sup> is considered

---

<sup>6</sup> CDC8(b)

<sup>7</sup> Listed as Site No CD0098 in Appendix 4 to CDC8(b)

suitable for 23 to 39 dwellings. Because of potential access issues a 6 to 10 year period is considered to be an appropriate timescale for delivery.

## **Main issues**

15. The main issues are:

- i. Whether the Council can demonstrate a 5 year supply of deliverable housing land, in accordance with the requirements of the NPPF;
- ii. The weight to be given to relevant saved policies of the Chiltern District Local Plan (CDLP) and policies in the Core Strategy (CS) for Chiltern District, which pre-date the 2012 NPPF;
- iii. The effect of the proposed development on the character and appearance of the surrounding area, including on the Chilterns AONB; the Great Missenden Conservation Area; and the settings of nearby listed buildings;
- iv. Whether the proposed development would provide safe and convenient access to and from the proposed residential properties for all users; and its effect on the safety and convenience of users of the nearby highway network;
- v. Whether the proposed development would provide sufficient on-site parking;
- vi. Whether the proposed development should make allowance for a review mechanism to consider the provision of affordable housing.

## **Reasons**

### ***Housing Land Supply (HLS)***

16. This issue can be dealt with fairly briefly, as the SOCG makes it clear that there is agreement between the parties that the Council cannot currently identify a 5 year supply of deliverable housing land as required by paragraph 73 of the NPPF<sup>8</sup>. Indeed the SOCG refers to a HLS of 2.97 years, based on a calculation undertaken in December 2017. This was amended to a 2.52 year HLS in a table provided to the inquiry by Mr Winwright<sup>9</sup>, and this was further modified to a 2.48 year HLS, once the table was corrected to account for a number of sites with outline planning permission which had been wrongly included<sup>10</sup>.
17. But although the Council accepted in its final submissions that it has no 5 year HLS at present<sup>11</sup> it also argued, on the basis of the evidence presented by Mr Winwright, that depending on the weight to be given to the emerging Vale of Aylesbury Local Plan (VALP), it could be considered as having a 5.89 year HLS<sup>12</sup>.
18. In this regard I understand that the VALP is at a fairly advanced stage, having recently completed its Examination hearings, with the Inspector's report anticipated later this year. I further understand that as part of the Duty to Co-operate the Council has a Memorandum of Understanding with Aylesbury Vale District Council, to the effect that the submission version of the VALP includes 5,750 dwellings of the Chiltern and South Bucks housing need which cannot be met within these latter authorities' own areas, over the period 2016 to 2036.

---

<sup>8</sup> See paragraph 5.3 in Doc 24

<sup>9</sup> Doc 12

<sup>10</sup> See paragraph 25 in Doc 28

<sup>11</sup> See paragraphs 44 to 55 in Doc 27

<sup>12</sup> This figure was adjusted downwards at the inquiry to about 5.81 years, again to account for a number of sites with outline planning permission wrongly included in Mr Winwright's data

19. However, although Mr Winwright's table shows that 3,000 of these dwellings are intended to assist in meeting Chiltern's housing need over the whole VALP plan period, there is no firm evidence before me to demonstrate that these dwellings are deliverable in the terms set out in the NPPF and - if so - how many would contribute to the 5 year HLS. In any case the VALP remains, at the present time, a draft plan, and I have been mindful of the appellant's assertion - not disputed by the Council - that the VALP's approach to housing has made it one of the most controversial emerging Local Plans in the country. In these circumstances, and having regard to paragraph 48 of the NPPF, I do not consider it appropriate to afford anything but limited weight to the VALP at this time.
20. With the above points in mind, there is nothing to cause me to disagree with the view set out in the SOCG, and I therefore conclude that the Council cannot currently demonstrate a 5 year supply of deliverable housing land.

***The weight to be given to relevant development plan policies***

21. As noted above, the Council only put evidence forward at the inquiry in support of reasons for refusal 1, 2, 5 and 6. In the case of reason for refusal 1 it argued that the proposed development would be contrary to Policies GC1, H3, CA1, CA2 and LSQ1 of the CDLP which was adopted in September 1997 (including alterations adopted in May 2001), and was consolidated in September 2007. The Council also maintained that the appeal proposal would conflict with Policies CS20 and CS22 of the CS for Chiltern District, which was adopted in November 2011. For reason for refusal 2 the Council alleged a conflict with CDLP Policy LB2, whilst for reason for refusal 5 conflict is alleged with CDLP Policies GC3, TR11, TR15 and TR16, along with CS Policies CS25 and CS26. CDLP Policy GC3 is also considered to be conflicted in the case of reason for refusal 6.
22. Section 38(6) of the Planning and Compulsory Purchase Act 2004 requires that planning applications be determined in accordance with the development plan unless material considerations indicate otherwise. One such material consideration is the NPPF which explains in its paragraph 7 that the purpose of the planning system is to contribute to the achievement of sustainable development. It goes on to indicate that the planning system has 3 interdependent and overarching objectives - economic, social and environmental - which need to be pursued in order to achieve sustainable development; and so that sustainable development is pursued in a positive way there is a presumption in favour of sustainable development at the heart of the NPPF.
23. This is now detailed in paragraph 11, which sets out 2 criteria relating to decision-taking. Under (c) it explains that development proposals that accord with an up-to-date development plan should be approved without delay; whilst under (d), it explains that where there are no relevant development plan policies, or where the policies which are most important for determining the application are out-of-date, planning permission should be granted unless either of 2 further criteria applies. In this context being out-of-date includes, for applications involving the provision of housing, situations where the local planning authority cannot demonstrate a 5 year supply of deliverable housing sites (with the appropriate buffer, as set out in paragraph 73). This is the case which applies here.
24. The first of these aforementioned criteria, set out in sub-paragraph (d)i, relates to situations where the application of policies in the NPPF that protect areas or assets of particular importance provide a clear reason for refusing the development proposed. A footnote elaborates on this point, explaining that AONBs and designated heritage assets fall into this category. I deal with these matters under

the next main issue. The second criterion, in sub-paragraph (d)ii, relates to situations where any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits, when assessed against the policies in the NPPF taken as a whole. I assess this matter in the planning balance which I undertake later in this decision.

25. In light of the above points, it is necessary to assess the development plan policies referred to in the reasons for refusal against the policies in the NPPF. From the CDLP, Policy GC1 sets out general criteria for development and seeks to ensure that development throughout the District is designed to a high standard. I see no material conflict between this policy and the NPPF, which makes it clear in its Chapter 12 that good design is a key aspect of sustainable development. Accordingly I consider that Policy GC1 can be given full weight.
26. Policy GC3 requires development proposals to seek to achieve good standards of amenity for future occupiers of that development, and to protect the amenities enjoyed by the occupiers of existing adjoining and neighbouring properties. As the NPPF seeks to ensure that new development provides a high standard of amenity for existing and future users<sup>13</sup>, as well as safe and healthy living conditions<sup>14</sup>, I consider that this policy can also be given full weight.
27. Policy H3 indicates that in the built-up areas excluded from the Green Belt (as is the case here), proposals for new dwellings will generally be acceptable in principle, subject to there being no conflict with any other policy in the CDLP. In this regard, NPPF paragraph 118 indicates that substantial weight should be given to the use of suitable brownfield land within settlements for homes and other identified needs, and that the development of under-utilised land should be promoted and supported, especially where land supply is constrained. As much of the District is indeed constrained by Green Belt and AONB I share the appellant's view that Policy H3, which supports development within existing settlement boundaries, should be given full weight.
28. However, I consider that only limited weight can be given to Policies CA1 and CA2, which relate to development within conservation areas, and Policy LB2 which relates to listed buildings, as they are not consistent with the NPPF's approach to development which affects heritage assets. Whilst these policies understandably seek to control development which would adversely affect such assets, they are all worded rather inflexibly as they do not allow for the balancing of any harm to the significance of designated heritage assets against any public benefits of the proposed development, as set out in the NPPF.
29. A similar situation arises in the case of Policy LSQ1, which relates to the Chilterns AONB. This policy reflects national policy in paragraph 172 of the NPPF insofar as it indicates that within the AONB the primary objective is to conserve and enhance the natural beauty of the landscape. However, parts of Policy LSQ1 set higher assessment thresholds than does the NPPF, requiring very exceptional circumstances to be present to outweigh objections on landscape terms, and stating that major development will be refused unless the development can be shown to be in the national interest, with no other alternative site outside the AONB being available.
30. In contrast, the NPPF indicates that planning permission should be refused for major development other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest. The NPPF now

---

<sup>13</sup> NPPF paragraph 127

<sup>14</sup> NPPF paragraphs 117 and 180

contains a definition of major development, and how this should be considered in the context of AONBs, and I return to this matter in the next main issue. This inconsistency with the NPPF means that in my opinion the aforementioned aspects of Policy LSQ1 can only carry limited weight.

31. Policy TR16 sets out a range of Parking and Manoeuvring Standards for different types of development, to be applied throughout the District. However, uniform standards such as these are not consistent with the NPPF, which explains in its paragraph 105 that local parking standards for residential and non-residential development should take account of a wide range of local factors. Because of this inconsistency with the NPPF I consider that Policy TR16 can only be given limited weight, and the same applies to Policy TR11 and that part of Policy TR15 which refers directly to the TR16 standards. Other parts of Policy TR16 can, in my view, be given full weight as they relate to sound design principles for parking areas.
32. Turning to the CS, Policies CS20<sup>15</sup>, CS22<sup>16</sup> and CS26<sup>17</sup> are generally consistent with the NPPF and can therefore be given full weight. Policy CS25, dealing with the impact of new development on the transport network, contains a direct reference to the Buckinghamshire Local Transport Plan 3 (LTP3) (2011-16), and in this regard is clearly out of date as the current version of the Local Transport Plan is LTP4. The rest of the policy can, however, be given full weight as it generally accords with the transport policies of the NPPF.
33. Drawing the above points together, it is clear that not all of the policies referred to in the reasons for refusal are consistent with the NPPF. I therefore conclude that some aspects of CDLP Policies CA1, CA2, LB2, LSQ1, TR11, TR15 and TR16, and CS Policy CS25, can only carry limited weight. I have regard to these matters when undertaking the planning balance, later in this decision.

### ***The effect on character and appearance***

34. *The Chilterns AONB*. As noted above, NPPF policy relating to AONBs is found primarily in paragraph 172. Amongst other matters this indicates that great weight should be given to conserving and enhancing landscape and scenic beauty in AONBs, where the scale and extent of development should be limited. The NPPF states that planning permission should be refused for major development other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest.
35. For housing, 'major development' is now defined in the NPPF Glossary as development where 10 or more homes will be provided, or where the site has an area of 0.5 ha or more. However, this definition is specifically noted as not to be applied in the context of paragraph 172. Instead, as is made clear in Footnote 55, in such cases it is for the decision maker to determine whether or not a proposal constitutes major development, taking account of the proposed development's nature, scale and setting and whether it could have a significant adverse impact on the purposes for which the area has been designated or defined.
36. In this regard the Chilterns AONB Management Plan 2014-2019<sup>18</sup> explains, in its Introduction, that this AONB was designated for the natural beauty of its landscape and its natural and cultural heritage. In particular, it was designated to protect its special qualities which include the steep chalk escarpment with areas of

<sup>15</sup> Policy CS20: Design and Environmental Quality

<sup>16</sup> Policy CS22: Chilterns Area of Outstanding Natural Beauty

<sup>17</sup> Policy CS26: Requirements of New Development

<sup>18</sup> CDC6

flower-rich downland, woodlands, commons, tranquil valleys, the network of ancient routes, villages with their brick and flint houses, chalk streams and a rich historic environment of hillforts and chalk figures.

37. With these points in mind I share the appellant's view that at present the appeal site, which is very enclosed by mature trees on its northern, southern and western boundaries, and by existing buildings on its eastern boundary, makes little contribution to the AONB. Indeed, because of its enclosed nature the site only has a limited influence upon character and appearance beyond its boundaries. I consider that with well-designed buildings, in keeping with other nearby development in the village, and the proposed landscaping treatment of the site, the appeal proposal would result in an enhancement of the character and appearance of the land within the appeal site itself.
38. This is borne out by the Council's Chiltern & South Bucks Townscape Character Study<sup>19</sup> which identified the site as forming part of the 'tightly formed centre' character area, and as having the potential for change. Such areas are noted as having the potential to be improved in terms of their quality and positive contribution to the overall quality of the character area they sit within.
39. I note that glimpses of the appeal site can be obtained from the High Street, along the 3 access points, but the Verified Views<sup>20</sup> submitted by the appellant demonstrate that there would only be limited changes in character as a result of the proposed development. Views along these accesses would still be of a backland area with various buildings, trees and other vegetation.
40. Moreover, as I saw at my site visit, the appeal site makes no material contribution to the AONB in longer views. I acknowledge that the boundary trees and trees within the site do form part of the wooded backdrop to the village in views from public footpaths to the east, but many of these trees would remain with the appeal proposal and I am not persuaded that any visual change arising from this development would be out of keeping with the nearby existing built form of the village, or result in any harm to the landscape and scenic beauty of the AONB.
41. It seems to me that those undertaking the HELAA assessments must have reached a similar conclusion, as Stage 2 of this process had regard, amongst other matters, to Policy Constraints<sup>21</sup> (including the AONB), but the site's location within the AONB was apparently not considered to be a barrier to development. I share that view. Overall I consider that the proposed development would not have any detrimental effect on the environment or the landscape and with this in mind, and having regard to paragraph 172 of the NPPF, I do not consider that this proposal should be seen as major development in the AONB.
42. But even if I am wrong on this point, I am satisfied that exceptional circumstances exist in this case, evidenced by the very limited scope for the provision of housing within Chiltern District on sites that do not lie within the AONB or the Green Belt; the fact that there is a severe shortfall against the housing requirement and that this shortfall has been persistent; and that the site lies in a sustainable location with easy access to local services and public transport<sup>22</sup>, within one of the most sustainable settlements in the District<sup>23</sup>. Indeed as this site has already been

---

<sup>19</sup> CDC12

<sup>20</sup> CDA13

<sup>21</sup> See paragraph 51 of CDC8(b)

<sup>22</sup> See paragraph 29 in CDA3

<sup>23</sup> Paragraph 7.5 of the CS identifies Great Missenden as one of the 5 most accessible settlements in the District

identified in the HELAA as being appropriate in principle for accommodating housing, it can reasonably be assumed that the Council is satisfied that such development would not be at odds with CDLP Policy LSQ1 and the NPPF, and that it therefore accepts that exceptional circumstances exist.

43. In light of the above points NPPF paragraph 172 does not provide a 'clear reason for refusing the development proposed', as required by NPPF paragraph 11(d)i.
44. *Conservation Area and Listed Buildings.* As already noted, the appeal site lies within the Great Missenden Conservation Area, close to a number of listed buildings. Most of these lie on the High Street towards the southern part of the site, although the Cross Keys public house and the Baptist Church are located just to the north of the site. The grade II listed 76 High Street lies within the site but would not be directly affected by the appeal proposal, and the site also contains the 2 non-designated heritage assets of the Old Red Lion (now unoccupied) and Forge Cottage.
45. Dealing first with the conservation area, reason for refusal 1 contends that the proposed development would not conserve or enhance its character and appearance, and as a result would be at odds with CDLP Policies CA1 and CA2, as well as with the provisions of the NPPF. The conservation area is fairly extensive in size, being broadly linear in form and containing much of the older part of the village to the east of the railway line, centred on High Street and Church Street, and also containing the more open area of Abbey Park and land around the Parish Church to the south and east. As such, the appeal site itself forms only a small part of the overall conservation area<sup>24</sup>
46. The Conservation Area Appraisal<sup>25</sup> (CAA) dates back to 1992 and does not reflect the approach now required by the NPPF and Historic England (HE), of examining the significance of a heritage asset and determining the effect of development proposals on that significance. That said, the CAA does identify the characteristics of the conservation area, referring to the fact that the old part of Great Missenden forms a linear village lying along the old A413 road on the west side of the Misbourne Valley in the lee of a wooded hillside. It refers to the town (sic) being seen as a compact and clearly defined settlement when viewed from Frith Hill in the east, noting that development has been limited by the railway and hill on the west, and by the River Misbourne on the east.
47. The CAA also refers to the narrow, winding nature of High Street and Church Street and the fact that they are intimate in scale, with the strong feeling of enclosure being enhanced by the number of glimpses of open country through gaps in the street frontage, and with the transition from country to town being immediate, particularly at the north and south approaches to the High Street.
48. The appellant highlights the fact that the CAA identifies the need to maintain the eastern edge of the village, where a strong relationship exists between the village and the surrounding landscape, but that no similar reference is made to the village's western side, arguing that this implies the western edge is less sensitive. The Council disputes this point, maintaining that the reference to the eastern side of the village arose because of pressure for development in the east at the time the CAA was prepared, pointing to the fact that this matter is referred to in the CAA at paragraph 14 under the heading 'Defects Requiring Remedy'.

<sup>24</sup> See Plan A2.2 in CDC9

<sup>25</sup> CDC10

49. However, it seems to me that this can only be partly correct, as the same matter is also referred to in paragraph 5 of the CAA – not as a defect to be addressed – but rather in the context of emphasising the importance of preserving the open character of land to the east, in views both out of and into the village. As such I share the appellant's view that the western side of the village and conservation area, which abuts the railway, less clearly expresses the relationship between the historic village and its wider landscape than does the eastern side, and is therefore less sensitive to further development.
50. The appeal site lies on this western side of the village and I consider that its rather messy and unkempt nature, with vacant mid-20<sup>th</sup> century dwellings, industrial buildings and garages, detracts from the more ordered and well-kept appearance of much of the more publicly accessible parts of the conservation area. But as the site is enclosed it is only visible in glimpsed views from the High Street and is not overly discernible in long-distance views from the east. Because of this I do not consider that the area of the site which lies to the west of the High Street makes any meaningful contribution to the conservation area in its present form.
51. Turning to the proposed development, the Council is critical of the density of the appeal proposal and also its layout, arguing that the bulk of the development would create a second line of major development behind the historic High Street, and that this would compete with the High Street buildings. Moreover, the Council maintains that the new dwellings, which would mainly be built on the higher, western part of the site, would be prominent in views from the east across the valley, especially as some trees within the site would need to be removed to allow the development to take place.
52. The Council is also critical of the fact that what it describes as a large block (of 5 apartments) would be located directly to the rear of the Old Red Lion, and that there would be 3 other deep-flanked sets of dwellings at right-angles to the main row of dwellings, staggered up the hill. It also argues that many of the proposed buildings would be taller than the Baptist Chapel, which is a prominent feature just to the north of the site, and that they would compete for attention, thereby diminishing the significance and impact of this important grade II listed building.
53. However, notwithstanding the Council's objections to the proposed layout, the Design and Access Statement<sup>26</sup> (DAS) shows that the linear style of development which forms the subject of this appeal, was favoured by the Council's Historic Buildings Officer (HBO) in post at the time pre-application discussions were taking place. Other alternatives put forward by the appellant were 'Mews Lanes' and 'Courtyards' layouts, but the HBO felt that the linear design was the most appropriate within the historic context of Great Missenden. Despite the Council's current objections, I see no good reason to take a contrary view on this matter.
54. Moreover, insofar as density is concerned, the DAS shows that the footprint and density of the appeal proposal<sup>27</sup> would be lower than nearby existing areas of High Street and Church Street. In this regard I note that the number of dwellings and density proposed would fall well within the ranges considered appropriate for this site in the Council's HELAA<sup>28</sup>, referred to earlier. Furthermore, whilst I acknowledge that the main row of proposed dwellings would sit on the higher,

---

<sup>26</sup> See CDA1

<sup>27</sup> Stated by Mr Handcock to be 37.8 dwellings per hectare (dph)

<sup>28</sup> CDC8(b), Appendix 4, suggests that 23 to 39 dwellings at a density of between 30 and 50 dph would be appropriate for this site

western part of the site, having viewed the layout and sections shown in the DAS, along with the Verified Views from a variety of representative viewpoints, I do not consider that the proposed dwellings would be obtrusive or out of keeping.

55. Indeed, it seems to me that it would mainly be the roofs of the proposed dwellings which would be seen from the eastern, distant viewpoints, and whilst this would 'thicken' the extent of development in the vicinity of the appeal site and the High Street at this point, the linear characteristic of the village would be retained. Development would be sufficiently far away from the Baptist Chapel to ensure that there would be no unacceptable impact on this listed building or its setting, and although some of the trees internal to the site would have to be removed, the well-treed backdrop to the village, rising up the western hillside, would not be adversely impacted by the proposed development.
56. In coming to these conclusions I have had regard to the fact that distant views of this part of the village are only available from certain locations on or close to the footpaths on the eastern hillside, and from a rather remote part of the churchyard. This leads me to conclude that the proposed development would not be a prominent or ever-present feature to walkers in these areas.
57. In terms of impact on the site itself, there are a number of mature trees within the site, as well as along several of the boundaries. As a result of the appeal proposal most of the trees within the site would be removed, but in his consultation response on the application the Council's Tree Officer<sup>29</sup> (TO) stated that the trees on the site are generally of poor quality and could be replaced by good landscape planting within any new development. That said, he did also indicate that the current proposal seemed to leave little suitable space for such planting.
58. Notwithstanding this latter point, the Officer's report to the Planning Committee records no objection from the TO, subject to the imposition of conditions requiring adequate protection for the retained trees. Conditions have been agreed between the Council and the appellant, covering such matters as tree protection, an arboricultural method statement for works within the root protection areas of the retained trees, and a landscaping scheme which includes proposals for new planting and its maintenance. As such I am satisfied that concerns regarding trees could be adequately addressed if planning permission was to be granted.
59. The DAS states that the general approach to architecture has been to restore the period buildings (the Old Red Lion and Forge Cottage), in keeping with their traditional character, whilst all the new build would be constructed from traditional materials, with their form echoing the established precedents for terraced housing in the village. This seems to me to be an appropriate and acceptable approach.
60. Moreover, although the Council maintains that the parking areas would dominate the development, the spaces would be spread throughout the scheme and would be interspersed with trees in raised beds and other landscaping features. As such I do not consider that either the parking areas or parked vehicles would be overly intrusive features within the development. Because of this, and having regard to all the above points, I share the appellant's view that the proposed development would enhance the character and appearance of the appeal site itself.
61. From within the High Street, as noted above, development on the appeal site would be largely unseen as it would only be glimpsed along the 3 accessways, and

---

<sup>29</sup> CDB2

would generally be well-shielded by existing development and/or existing or proposed vegetation. This is evidenced in the Verified Views document<sup>30</sup>, and as a result I find it difficult to share the Council's view that there would be competition between the proposed development and the historic High Street. For reasons just given I do not believe this would be the case.

62. There would be a noticeable impact on the Old Red Lion as its southern ground floor elevation, alongside the access, would be altered and set back by some 700mm, in order to improve visibility for drivers entering the High Street from within the site (see later). This would result in the introduction of a 'side-jetty' to this building at first floor level. However, whilst this would be an atypical feature in the High Street, the Old Red Lion itself is already a rather unusual and atypical building in this locality, as is detailed in the Heritage Impact Assessment (HIA)<sup>31</sup>.
63. This explains that the Old Red Lion is a mix of 2 and 2.5 storeys, with this taller, southern part making it stand out in the High Street where a lower 2-storey building height is almost ubiquitous. Moreover, this taller, 2.5-storey element has resulted in the eaves on the street frontage being much higher than the head of the first floor windows, a feature not repeated on other High Street buildings, which have the more usual relationship between the eaves line and the upper storey windows. I share the view expressed in the HIA that this gives the building a somewhat awkward appearance. Furthermore, the presence of tile hanging on the front and side elevation is not a common feature in the High Street.
64. On the basis of the representation shown in the Verified Views document I do not consider that the proposed introduction of a side-jetty would be unduly harmful to the overall appearance of this building. Furthermore, I have noted that a Structural Engineer's Assessment - not disputed by the Council - indicates that such alterations would be feasible. With these points in mind, I consider that although this non-designated heritage asset would experience some loss of fabric, its significance as a prominent building on the High Street and a former coaching inn would not be harmed.
65. Similarly, I do not consider that the modest alterations proposed for Forge Cottage - primarily the relocation of its front door - would have any material impact on the significance of this non-designated heritage asset.
66. With regards to the nearby listed buildings I have already noted that 76 High Street, which forms part of the appeal site, would not be directly affected by the appeal proposal, and I do not consider that the proposed changes elsewhere on the site would have any material impact on this building's setting. I have also concluded, earlier, that there would be no adverse impact on the setting of the Baptist Chapel.
67. In my opinion the only other listed buildings which could potentially be affected by the proposed development are Nos 64-74 on the western side of the High Street. No 64 is grade II listed and sits on the south side of the proposed main access to the site. However, it already backs onto a parking area for the Class B1 office building, and this existing building would largely shield No 64 from any development on the appeal site. Whilst some of the proposed new build to the rear of the Old Red Lion could possibly be visible from rear-facing windows of No

<sup>30</sup> CDA13

<sup>31</sup> See CDA1

- 64, any such development would be at a distance and I do not consider that it would have any significant adverse impact on the setting of this building.
68. I have noted the Council's concerns that a carelessly driven vehicle could cause damage to the side elevation of this property, but of course that is also the case now. That said, I do acknowledge that the current low level of activity associated with the lawful use of the appeal site means that use of the access by large vehicles is unlikely to be a common occurrence at the present time. I return to this matter under a later main issue.
69. Turning to the other listed buildings – Nos 66-74 – the Council has raised concerns about the impact of the proposed development when viewed from these and other High Street properties. However, no specific harm has been detailed and I see no reason why the proposed built form on the appeal site – which would in any case be some distance from the rears of these buildings – should result in any unacceptable visual or other harm. In this regard I note that Stage 2 of the HELAA assessment process took account of Environmental Constraints<sup>32</sup> – including listed buildings – and did not see this matter as a barrier to development on the appeal site. I share that view.
70. I have also been mindful of the fact that in its consultation response<sup>33</sup>, HE did not consider that the scheme would cause harm to the character or appearance of the conservation area as experienced from within it, as it would be largely screened from clear views along the High Street and would only be seen in glimpsed views along the 3 access points. HE commented that from outside the conservation area boundary, although the roofs of the scheme would be clearly seen from the graveyard of the Parish Church, they would form part of a very varied roofscape into which they should fit reasonably well, provided that a variety of similar materials are used. In this regard, the DAS notes that the architectural treatment of the proposals would reflect the local vernacular, in order to fit comfortably and sensitively into the village.
71. HE did raise some concerns about the proposal, but these were only in relation to the possible implications of an inadequate amount of parking being provided by the development and the possible consequences of parking spilling over into the sensitive, small streets of the village centre. I return to this matter under a later main issue.
72. Drawing all the above points together I do not consider that the appeal proposal would have any undue impact on the linear nature of the village or the conservation area, nor would it adversely impact on any of the conservation area's characteristics such as the narrow, winding streets and the strong sense of enclosure, as detailed above. It would therefore preserve the character and appearance of the conservation area. Furthermore, it would not have any adverse impact on listed buildings or their settings, and whilst it would result in an alteration to and some loss of fabric of the non-designated Old Red Lion, on balance I do not consider that this would result in any material harm. As such I am satisfied that the proposed development would not result in any harm to the significance of designated or non-designated heritage assets. The presence of designated heritage assets therefore does not constitute a clear reason for refusing this development, in the context of NPPF paragraph 11.

---

<sup>32</sup> See paragraph 51 of CDC8(b)

<sup>33</sup> Included as Appendix A16 to Mr Handcock's evidence

73. **Summary.** Overall on this main issue, in light of all the matters detailed above, I conclude that the appeal proposal would not have an adverse impact on the character and appearance of the surrounding area, or on the Chilterns AONB, the Great Missenden Conservation Area, or on the settings of nearby listed buildings. The impact on the non-designated Old Red Lion and Forge Cottage would also be acceptable. Accordingly – and notwithstanding the fact that I consider that some of these policies can only be given limited weight – I find no material conflict with CDLP Policies GC1, H3, CA1, CA2, LB2, or with CS Policies CS20 and CS22. Moreover, there would be no conflict with NPPF policies dealing with AONBs or heritage assets.

***The safety and convenience of the proposed access points, and of users of the nearby highway network***

74. The issue of access to the proposed development was, in my view, the most important concern raised by those interested persons who spoke at the inquiry, and it was also the most mentioned matter in the various representations made at application stage<sup>34</sup> and at appeal stage. Concerns over the adequacy and safety of the access points led to the Council imposing reasons for refusal 3 and 4 when it refused planning permission for this proposal. I can understand and appreciate these concerns as all of the 3 existing access points to the appeal site are relatively narrow, with none of them being of a standard which BCC as local highway authority would be prepared to adopt. As such, the accessways and the shared surface roads within the development would all remain private.
75. However, it is clear that these existing accesses are all in current use, as I was able to see at my site visit. I observed that the main access, between the Old Red Lion and 64 High Street is currently used by visitors to the TSB Bank (which has a small car park to the rear of its High Street premises); by workers at, and visitors to, the existing B1 office building to the rear of No 64; and by people who park to the rear of the Old Red Lion, apparently taking advantage of the fact that it is currently vacant. More importantly however, the Council, BCC and the appellant all agree that there are various existing lawful uses on the appeal site (including the Old Red Lion itself), which could generate traffic without the need for any further planning permissions to be granted.
76. The submitted evidence indicates that this fact formed the basis of a series of discussions, primarily between the appellant and BCC, in an attempt to establish a form and quantum of development for the site which could be considered 'traffic neutral'. In other words, an assessment was made of the potential traffic generation which could legitimately be expected to arise from the mix of houses, garages, and Class A2 and Class B2 uses present on the appeal site. In considering this matter I am well aware of the currently run down nature of the uses on the appeal site, and I fully accept that only a very limited amount of traffic is likely to be generated by these uses at present.
77. But this cannot disguise the fact that these existing uses (or similar) could be resurrected without the need for planning permission, and it is therefore quite legitimate and indeed necessary for the potential, lawful traffic generation of the appeal site to be taken into account. Using figures from the industry standard TRICS<sup>35</sup> database, agreed between BCC and the appellant, BCC confirmed in September 2017 that a development scheme comprising 23 houses and 10 flats

<sup>34</sup> CDB3

<sup>35</sup> TRICS: Trip Rate Information Computer System

would be considered traffic neutral, compared to the existing use of the site<sup>36</sup>.

Minor adjustments were then made to the calculations by the appellant, leading to its view that a more accurate mix for a traffic neutral scheme would be 25 houses and 9 flats<sup>37</sup>. It is on this basis that the scheme which now forms the subject of this appeal was prepared and submitted in October 2017.

78. However, despite this apparent agreement on a traffic neutral position, the appellant only received the consultation comments from BCC on the application on 3 April 2018, just a few days before the planning application was refused under delegated authority on 6 April 2018. I find this BCC consultation response somewhat confusing and contradictory, as in one paragraph it appears to agree that the existing uses on the site could be expected to generate 124 daily 2-way vehicle movements. But it then goes on to carry out a calculation leading to a different total of 111 daily 2-way vehicle movements, using a slightly different traffic generation rate for the garages on the site.
79. With an agreed traffic generation for the appeal proposal of 123 daily 2-way vehicle trips, BCC argued that this proposed development would be likely to generate 12 more daily trips than could potentially be generated by the existing uses, resulting in an intensification of use at both the Old Red Lion and the Missenden Mews access points. In addition, the BCC consultation response raised concerns about the achievable pedestrian visibility splays at the Old Red Lion access, although the appellant maintained that agreement had previously been reached with BCC on this matter. It was as a result of this consultation response that the Council imposed reasons for refusal 3<sup>38</sup> and 4<sup>39</sup>.
80. In his transport proof of evidence to the inquiry, Mr Fitter, for the appellant, acknowledged that providing an overall traffic neutral solution would, indeed, result in modest increases in traffic at the Old Red Lion and the Missenden Mews accesses of 5 and 3 daily 2-way trips respectively, but that this would be compensated for by a reduction of 9 daily 2-way trips at the narrowest, northern access. But through Mr Fitter's evidence the appellant also made the point that there was an alternative legitimate fall-back position which could be pursued, if planning permission is not forthcoming for the appeal proposal, namely the marketing of the upper floors of the Old Red Lion for Class A1 retail use, and the change of use of the existing Class B2 unit to a B1 use.
81. Evidence from local commercial property consultants<sup>40</sup> has been provided by the appellant to indicate that there could be significant interest in this suggested use of the upper floors of the Old Red Lion for retail purposes, and whilst the consultants did not comment directly on the alternative B1 use of the existing industrial unit, the fact that there is already a small B1 office use to the rear of 64 High Street leads me to the view that such an alternative use could well be viable. In view of these points I note that on the basis of this latter proposition alone (the suggested change from B2 to B1), there would be a likely daily increase in traffic generation of 11 2-way vehicle trips, effectively cancelling out the 12 additional trips from the proposed development alleged by BCC in its consultation response.

---

<sup>36</sup> CDA9

<sup>37</sup> Also in CDA9

<sup>38</sup> Relating to an alleged intensification of use of the Old Red Lion access, giving rise to danger and inconvenience for users

<sup>39</sup> Relating to alleged inadequate width of vehicle and pedestrian access points, and concerns about safety and convenience

<sup>40</sup> CDA14

82. But more importantly, a retail use of the upper floors of the Old Red Lion would significantly increase the traffic generation of the existing uses on the appeal site, by over 600 2-way trips on a daily basis, with 2-way morning and evening peak hour vehicle movements of 35 and 53 respectively. Having reviewed and accepted the veracity of this fall-back position BCC wrote to the Council on 20 July 2018, shortly before the opening of the inquiry, to indicate that it no longer felt able to support reasons for refusal 3 and 4. As a result, in opening its case at the inquiry<sup>41</sup> the Council withdrew these 2 reasons for refusal and presented no evidence on this matter.
83. Concerns about access issues were, however, still expressed by those who spoke at the inquiry as individuals and on behalf of Great Missenden Parish Council and the Great Missenden Village Association and, as already noted, concerns about access were expressed in the various written representations. The main Old Red Lion access was the subject of particular criticism.
84. However, the appellant proposes certain improvement to this access, including a widening to 4.2m at ground floor level, in order to improve visibility between emerging drivers and pedestrians using the western footway on the High Street, and the removal of the modern extensions to the rear of the Old Red Lion. This latter measure would reduce the extent of the restricted width section to just about 11m. All other shared surface roads within the development would be wide enough to allow 2 cars to pass, and would also provide for necessary parking (see later) and manoeuvring. On this point I note that the Buckinghamshire & Milton Keynes Fire Authority raised no objection to this proposal, simply commenting that particular attention must be given to parking facilities to prevent 'chronic double parking' issues, which could ultimately affect emergency service attendance.
85. I acknowledge that this widening at ground floor level would not benefit taller vehicles but swept path analyses, taking account of the on-street parking bays on High Street, have been submitted to show that a wide range of vehicles could access the site even without this widening. Whilst some of the largest vehicles, including pantechnicons, would not be able to enter through the Old Red Lion access, the appellant has indicated that access to the site by such vehicles would be controlled by both a Demolition and Construction Method Statement and a Delivery and Servicing Plan, both of which could be secured by conditions if planning permission is granted.
86. In view of these points I am generally satisfied that the access arrangements for the development would be safe and satisfactory, although I do share the Council's concern regarding the potential for damage to occur to 64 High Street if the existing metal post at the front of the Old Red Lion access, protecting this property, is removed as proposed. That said, it was agreed at the inquiry that measures could be introduced by a planning condition to address this matter, if planning permission is granted. I return to this point later in this decision.
87. With regard to BCC's concerns about pedestrian visibility splays at the Old Red Lion access, I consider that the appellant's proposal to widen this access to 4.2m would provide a satisfactory level of inter-visibility between pedestrians and drivers at this location. In this regard I have been mindful of the comments from interested persons, that pedestrian movements in the High Street were low at the time of my site visit, both because it was a school holiday period, and also

---

<sup>41</sup> See Doc 2

because the popular tourist attraction of the Roald Dahl Museum, located within the High Street, was closed in the aftermath of a recent flooding incident.

88. However, whilst I acknowledge that the appeal proposal would result in a fairly high level of traffic movement at the Old Red Lion access, this is an established and relatively well-used access which, in terms of its form and layout, would not be dissimilar to many of the other access points along the High Street. Moreover, submitted accident information indicates that there have been no personal injury accidents at this or other similar accesses along the High Street over the last 3 years. Because of these points, and the satisfactory standards of visibility, coupled with the slow speeds at which vehicles would inevitably have to manoeuvre at this location, I do not consider that the increased use of this access would unduly compromise the safety of either drivers or pedestrians.
89. Taking all the above points into account, I conclude that the proposed development would provide safe and convenient access to and from the proposed residential properties for all users, and would not have an unacceptable impact on the safety and convenience of users of the nearby highway network. Accordingly, and notwithstanding the fact that the accessways and the shared surface roads within the site would all remain private, I find no conflict with CDLP Policies TR2 or TR3 which, in summary, require new development to have safe and adequate access to the existing highway network. Nor do I find any material conflict with CS Policies C25 or C26, or with the transport policies in the NPPF.

***Whether sufficient on-site parking would be provided***

90. Reason for refusal 5 alleges that the appeal proposal would not make adequate provision within the site for parking and manoeuvring of vehicles clear of the highway. As such it maintains that if permitted, the development would be likely to lead to additional on-street parking and to vehicles parking ad-hoc within the site access points, to the detriment of public and highway safety. The Officer's report to Committee states that 74 parking spaces would be needed for the 34 new dwellings, in order to comply with the requirements of CDLP Policy TR16. This figure was increased to 82 spaces in the evidence of the Council's planning witness, Mrs Smith, who also argued that a further 28 spaces could be needed to compensate for displaced on-site parking/garaging, together with replacement parking for the commercial use in the ground floor of the Old Red Lion.
91. However, the parking standards set out in Policy TR16 are based upon car ownership data from the 1991 census, which is clearly now out of date. Moreover, these Policy TR16 standards apply uniformly throughout the District, and do not take specific account of relevant local factors, such as those set out in paragraph 105 of the NPPF. This indicates that policies setting out local parking standards for residential and non-residential development should take account of the accessibility of the development; the type, mix and use of development; the availability of and opportunities for public transport; and local car ownership levels; together with an adequate provision of spaces for electric and other ultra-low emission vehicles.
92. The Transport Assessment (TA) submitted with this application makes reference to the Chiltern District Council Accessibility, Parking Standards and Community Infrastructure Study, dated 2005, which shows that Great Missenden is considered to be one of the most accessible settlements in Chiltern District. In addition the centre of Great Missenden, including the appeal site, is shown as achieving the highest accessibility index available. With these points in mind, the TA comments

that any residential development in this location would be suitable for a suppressed level of parking, and in view of the close proximity of local facilities and services, the rail station and a reasonable level of bus public transport, I see no reason to doubt this view.

93. In determining what it considered to be an appropriate level of parking provision for the proposed development the TA also undertook an analysis of 2011 census data to establish levels of vehicle ownership in the Great Missenden ward, differentiated between houses, maisonettes and flats. This exercise produced a predicted parking demand of some 43 spaces. When allowance is made for 1 space for Forge Cottage, and 1 for the retained A1 use in the ground floor of the Old Red Lion, as well as some parking for visitors, the appellant argued that the proposed total parking provision of 51 spaces would be appropriate and acceptable for this development.
94. I favour this approach adopted by the appellant. Indeed Mrs Smith for the Council accepted, under cross-examination, that Policy TR16 is not consistent with the NPPF and that the proposed development should not be required to make provision for the amount of parking that this policy would suggest. The parking demand figure was, in fact, amended during the course of the inquiry to incorporate information relating to households having 3 cars<sup>42</sup>, but it was agreed that a parking demand figure of 52 spaces would be reasonable for this development, and that this would allow for a degree of visitor parking.
95. This would amount to just 1 space more than the appeal proposal would provide, meaning that 1 resident's car or visitor's car may need to park on the carriageway within the scheme. The Council did not suggest that this would be unacceptable, and I share the appellant's view that this would be unlikely to have any significant impact on the operation or safety of the scheme. In light of the concession made by Mrs Smith, and the agreement between the parties on this updated parking information, the Council did not cross-examine Mr Fitter on parking matters, or indeed on any transport matters – although it did not formally withdraw reason for refusal 5.
96. As noted earlier, HE raised concerns about the parking provision of the appeal proposal, but those concerns would likely have been based on the Council's assessment of parking demand at that time – namely the Policy TR16 requirement. This has now been shown to be not appropriate for this site, and as such I give very little weight to HE's concerns that parking from the proposed development could spill over into the village centre and harm the character and appearance of the conservation area. Not only is it unlikely that there would be any significant over-spill parking, on the basis of the figures set out above, it is also the case that there is no unrestricted parking permitted on the public highway within some 200m of the appeal site, with all highway within that range being protected by traffic regulation orders, either in the form of double yellow lines or restricted on-street parking bays.
97. Drawing the above points together I conclude that the proposed development would provide sufficient on-site parking, and whilst there would be a conflict with CDLP Policy TR16, and by extension Policies TR11 and TR15, these policies only carry limited weight in this case for the reasons I have already given. Insofar as the proposed parking provision is concerned I find no conflict with CDLP Policy GC3, or with CS Policies CS25 and CS26 or the NPPF.

---

<sup>42</sup> See Docs 14 and 15

***Whether there should be a review mechanism to consider the provision of affordable housing***

98. A Viability Report<sup>43</sup> (VR) submitted by the appellant with the planning application indicated that the proposed development had a Residual Site Value (or Residual Land Value – RLV), excluding fees and costs, in the region of £1.669 million. This compares with a Benchmark Land Value (BLV) of some £5.09 million, and as the RLV was lower than the BLV the VR concluded that the proposed development could not support contributions to planning obligations or affordable housing. However, it was later clarified by the appellant that the VR had included a contingency figure of £150,000, to go towards any requested planning obligations, but that this had been overlooked when the text of the VR was updated from the appellant's earlier proposal for this site.
99. To clarify – the appellant confirmed that the appeal proposal could support the financial contribution of £138,654 requested by the School Commissioning Officer, to go towards additional educational facilities, the need for which would be generated by the proposed development. This would be secured by means of the submitted S106 UU.
100. This VR, which had been prepared in November 2017 was reviewed by financial consultants on behalf of the Council in December 2017 and, whilst disagreeing about the level of costs and values assumed in the report, these consultants nevertheless did agree that the proposed development could not support on-site affordable housing or make a commuted capital payment in lieu of on-site provision.
101. The relevant policy framework in this regard is provided by CS Policy CS8, which indicates that in new developments of 15 dwellings or more the Council will aim to achieve a target of at least 40% of the dwellings being affordable. The policy does go on to say, however, that there will be occasions when it is not financially viable for developers to meet the targets in this policy. In such circumstances the Council will require clear evidence to demonstrate why it is not viable to do so.
102. In this case, as a result of the submission of the VR and the Council's assessment thereof, when planning permission was refused the Council did not include the lack of affordable housing, or a commuted payment in lieu of the same, as a reason for refusal. It did, however, attach an Informative to the decision notice, advising the appellant that if it decided to appeal the refusal it would be expected to submit a satisfactory Legal Agreement, to include a review mechanism, which would need to be carried out prior to the implementation of any approved scheme.
103. Whilst the inquiry was sitting, financial consultants for the appellant and the Council continued to discuss and negotiate, with a view to preparing a Viability SOCG. Such a document was prepared in draft form<sup>44</sup> but no signed and completed version was submitted before the inquiry closed. Although a number of matters were agreed, this Draft SOCG also sets out the various areas where the parties could still not reach agreement, including on the assumed figures for RLV. The Council argued for a figure of about £4.016 million, whilst the appellant's latest figure was about £2.665 million. However, the parties agreed that on the basis of either of these figures the appeal proposal still could not support on-site affordable housing provision, or a commuted payment in lieu of this.

---

<sup>43</sup> Within CDA1

<sup>44</sup> Doc 16

104. But notwithstanding the above, the appellant has included a 'Viability Appraisal' in its submitted UU which would be triggered if, following any grant of planning permission for this proposal, fewer than 10% of the dwellings have been constructed to at least 0.5m above foundations, with incoming services and site access laid out, by the second anniversary of the date of planning permission.
105. The aim of this Viability Appraisal would be to establish whether the viability of the proposed development had improved over this period, to the extent that an affordable housing contribution should be paid by the appellant to the Council. The Council argues that both parties would be protected by such a trigger and review, as it would encourage the appellant to expedite the scheme in a timely manner, but would also deliver a commensurate level of contribution if viability was to improve, and if implementation was delayed.
106. However, despite including these provisions in the UU, the appellant argues that such a review is not justified for a single phase proposal such as this, for which full planning permission is sought, and for which certainty of costs and expenditure is needed at the outset. The appellant further argues that the imposition of such a viability review mechanism would not accord with guidance in Regulation 122 of the Community Infrastructure Levy (CIL) Regulations 2010, which states that a planning obligation may only constitute a reason for granting planning permission for the development if the obligation is (a) necessary to make the development acceptable in planning terms; (b) directly related to the development; and (c) fairly and reasonably related in scale and kind to the development.
107. In this case the UU fails the first of these criteria, as a Viability Appraisal is not necessary to make the development acceptable in planning terms. This is borne out by the fact that the Council did not cite the absence of affordable housing provision as a reason for refusal, as already noted. CS Policy CS8 clearly allows housing development to take place without achieving the target of 40% of affordable housing, when it can be demonstrated that a development is not able to viably support such provision – as here – and in such circumstances there is no conflict with this policy.
108. I have noted the Council's comment that neither the NPPF, the PPG<sup>45</sup>, nor professional guidance from the Royal Institution of Chartered Surveyors (RICS) in its document *Financial Viability in Planning*<sup>46</sup>, preclude the use of viability review mechanisms on single-phase schemes, and do not expressly advise on this matter. However, this RICS guidance does state that re-appraisals of viability are generally suited to phased schemes over the longer term rather than a single-phase scheme to be implemented immediately, which requires certainty. I give weight to this view.
109. Drawing all of the above points together, I share the appellant's view that there is no reasonable basis for concluding that in the absence of a review mechanism to re-assess viability, planning permission would have to be refused for this proposal. Accordingly, I conclude that a viability review mechanism is not necessary to make the proposed development acceptable in planning terms, and those parts of the S106 UU dealing with the suggested 'Viability Appraisal' therefore do not comply with Regulation 122 of the CIL Regulations, as detailed above.

---

<sup>45</sup> Doc 18

<sup>46</sup> CDC18

### *Other matters*

110. One of the Council's reasons for refusal – No 6 – alleged that the appeal proposal fails to make adequate provision for the collection of waste from the site, and that this would be contrary to CDLP Policy GC3. However, the TA submitted with the planning application had made it quite clear that the refuse collection strategy for the proposed development was to introduce a private collection arrangement using smaller vehicles. The TA explained that future residents would be expected to pay a service charge to a management company for this service, and that this could be incorporated into a S106 planning obligation. The Officer's report to Committee commented that no precise details of such a refuse collection arrangement had been provided, and that this matter could therefore not reasonably be the subject of a planning condition.
111. The Council's witness on this matter confirmed that the accessibility of the appeal site was such that the Council would have to make special arrangements in order to collect waste from it, and that the cost of this would be unreasonably high. Like the appellant, I agree that in these circumstances the Council would be under no statutory duty<sup>47</sup> to collect waste from the proposed development. I am therefore satisfied, on the basis of the evidence placed before me, including swept path analyses and measurements taken on site, that appropriately-sized private refuse collection vehicles would be able to access the site.
112. As such, I see no reason why this matter could not be satisfactorily addressed by provisions set out in the submitted UU, which require a Management Company to be established and a Waste and Recycling Management Strategy to be submitted to and approved by the Council. Indeed, by the time the inquiry closed, the Council had accepted that a private waste collection service could be possible on this site, secured through an appropriate S106 planning obligation<sup>48</sup>. This matter therefore does not weigh against the appeal proposal.
113. On other matters, Mr Wintgens spoke at the inquiry as joint owner and occupier of 48 High Street. He raised general concerns about access, similar to those put forward by other objectors, but had particular concerns regarding the northern access to the appeal site which, as noted earlier, passes between his property and 50 High Street. No 48 also has a flying freehold over this access track, with this first floor part of this property containing a bathroom and a bedroom.
114. Mr Wintgens objected to the fact that this northern access is edged in red on the submission plans, showing that it forms part of the appeal site. He maintains that this is an error as the track is unregistered and is not owned by the appellant. However, whilst I note these points, there is no firm evidence before me to demonstrate that the appellant does not have the necessary freehold or leasehold interest in this track. In any case, an applicant does not have to own all the land in question to be able to apply for planning permission.
115. I acknowledge that Mr Wintgens has use of this track, which leads to his double parking space, and it seemed to me at my site visit that other neighbouring properties may well make similar use this track. I understand, however, that it also provides access to 2 of the now derelict houses<sup>49</sup> on the appeal site, and that vehicular use of this track would therefore reduce under the appeal proposal as it

---

<sup>47</sup> As detailed in Section 45(1)(a) of the Environmental Protection Act 1990 – see CDE2

<sup>48</sup> Paragraphs 100-102 in Doc 27

<sup>49</sup> Orchard Cottage and Misbourne Cottage

would not be a vehicle access to the proposed development. It would become one of 3 possible pedestrian accesses to the site, but although Mr Wintgens argued that this would represent an unacceptable intensity of use and a gross invasion of his privacy, no firm evidence has been submitted to support this view.

116. The extent of the use of this northern track would undoubtedly depend upon where pedestrians would be travelling to and from, and because of the range of existing facilities and services along the High Street I see no reason why pedestrian use of this northern access would be excessive or unacceptable.
117. Mr Paul Tompson also spoke at the inquiry, as owner of 64A, 66 and 68 High Street, and of the businesses which occupy these properties. His main concerns also related to access difficulties and matters of highway safety, which I have addressed earlier in this decision, but he was also concerned about potential damage to his property from carelessly driven larger vehicles. I consider that this is a legitimate concern, and I have already made reference to a planning condition which could be imposed on any planning permission, and which I consider could satisfactorily address this matter.

### **Summary, planning balance and overall conclusion**

118. To summarise the matters detailed above, by the time the inquiry closed the Council had withdrawn 2 of its original 6 reasons for refusal, relating to access matters, and had not seriously defended a further 2, relating to parking provision and waste collection. I have already established that the Council cannot currently demonstrate a 5 year supply of deliverable housing land – as is confirmed in the agreed SOCG – and that many of the policies which are most important for determining this application are out-of-date. This means that the proposal needs to be considered against the NPPF's paragraph 11(d).
119. I have considered sub-paragraph (d)i and have concluded that the appeal proposal does not conflict with NPPF policies that protect areas or assets of particular importance, and that there are therefore no clear reasons under this sub-paragraph for refusing the proposed development. Insofar as sub-paragraph (d)ii is concerned, the 'tilted balance' is engaged and it is necessary to assess whether any adverse impacts of granting planning permission would significantly and demonstrably outweigh the benefits of the proposed development.
120. In this regard I share the appellant's view that this proposal would give rise to a number of benefits, across each of the 3 objectives for achieving sustainable development as set out in paragraph 8 of the NPPF – economic, social and environmental. Firstly, there would be benefits to the local economy as a result of direct and indirect jobs generated during the construction period, and as a result of increased population, which could increase demand for and use of local services and businesses in the High Street and the wider District, once the housing is occupied. This would help to maintain and enhance these services and businesses, thereby increasing their viability.
121. I acknowledge that these benefits would not be unique to this development, but would flow from any new housing development of this size within the District. However, this does not detract from the fact that the appeal proposal would give rise to these real benefits to which I attach significant weight, in accordance with NPPF paragraph 80.
122. In social terms, the proposed development would deliver 34 new homes of different tenures and sizes in a District which has a recent history of failing to

deliver sufficient homes to meet housing need, thereby helping to improve the HLS position. Moreover, the provision of a mix and range of housing sizes would assist in creating a strong, vibrant and healthy community.

123. The proposal would also improve the existing access point at the Old Red Lion by improving visibility for drivers exiting on to the High Street at this location. This would have positive safety implications for existing road users and pedestrians, as well as for users of the proposed development. In addition, the proposal would provide a financial contribution towards the provision of additional educational facilities in the locality. I also give significant weight to these social benefits.
124. In environmental terms, the proposed development would provide for future growth of Great Missenden within the existing settlement boundary, and would not expand the town into the Green Belt or undeveloped areas of the Chilterns AONB. Moreover, the proposal would result in the use of a brownfield site, set in a very accessible location in one of the most sustainable settlements in the District. As noted by the appellant, it would represent a medium-sized scheme, albeit important in the context of Chiltern District, and would assist the Council in meeting the target set out in paragraph 68(a) of the NPPE, to accommodate at least 10% of its housing requirement on sites no larger than 1 ha.
125. There would also be a potential benefit arising from the fact that the proposed residential use of the site would generate significantly fewer daily traffic movements than could the lawful fall-back use of the site. In addition, the high quality design proposed for the development, coupled with the provision of new communal amenity space and landscaping on the site, would improve the character and appearance of the surrounding area when compared with the poor character created by the existing buildings on the site. There would also be a benefit arising from the re-use of the non-designated heritage asset, the Old Red Lion, which would assist in ensuring its conservation. Again, I consider that these environmental benefits should attract significant weight.
126. As I have not found against the appeal proposal on any of the main issues, I am satisfied that there would not be any adverse impacts of granting planning permission of sufficient weight to significantly and demonstrably outweigh the above benefits, taken together. I therefore conclude that the appeal proposal should benefit from the Framework's presumption in favour of sustainable development. This is a material consideration in the proposed development's favour and, in my assessment, it outweighs the conflict I have found with CDLP Policies TR11, TR15 and TR16, as I have earlier concluded that these policies can only carry limited weight in this appeal.
127. I do realise that many local residents will be disappointed by my findings in this case, especially in view of the strong opposition to the proposed development on access grounds. However, in light of all the above points my assessment of the planning balance leads to the overall conclusion that this proposal should be allowed, subject to the imposition of a number of conditions, as discussed at the inquiry and set out in the attached Schedule. I have made minor alterations to the wording and the order of some of the conditions in the interests of clarity.

#### Conditions

128. Condition 1 is the standard condition for full planning permissions, whilst Condition 2 is imposed to provide certainty and to ensure that the development is carried out in accordance with the approved plans. Condition 3 is imposed to minimise

damage and inconvenience to highway users, and to protect the amenities of the area. Conditions 4 and 5 are imposed to ensure that the existing established trees and hedgerows within and around the site that are proposed to be retained are safeguarded during building operations.

129. I have imposed Conditions 6 and 7 to ensure that risks from land contamination to future users of the site and neighbouring land, together with risks to controlled waters, property and ecological systems, are all minimised. These conditions will also ensure that the development can be carried out safely, without unacceptable risks to workers, neighbours and other off-site receptors. Condition 8 will safeguard any protected species identified under the Wildlife and Countryside Act (as amended), whilst Conditions 9, 10, 11 and 18 are imposed to ensure that the development is of a satisfactory appearance.
130. Condition 12 is necessary in order to influence modal choice and reduce single-occupancy car journeys, whilst Condition 13 will ensure that servicing and delivery trips to the proposed dwellings are satisfactorily organised and arranged. Condition 14 is imposed in order to minimise danger, obstruction and inconvenience to users of the highway and of the development, whilst Condition 15 is imposed in order to safeguard 64 High Street from damage by vehicles.
131. Conditions 16 and 17 are necessary in the interests of the visual amenities of the locality, with Condition 19 being imposed so that the local planning authority can properly consider whether any future proposals will constitute overdevelopment of the site, or in any other way be detrimental to the character of the locality. Condition 20 will ensure that adequate and satisfactory provision is made for the parking of vehicles clear of all carriageways to enable vehicles to draw off, park, load/unload and turn clear of the highway to minimise danger, obstruction and inconvenience to users of the adjoining highway. Condition 21 will preserve the amenities of the occupants of the adjacent dwellings.
132. Condition 22 is imposed to ensure that a sustainable drainage strategy has been agreed prior to construction, and to ensure that there is a satisfactory solution to managing flood risk, whilst Condition 24 will ensure that the sustainable drainage system is designed to the appropriate technical standards. Condition 23 will ensure that maintenance arrangements for the sustainable drainage system have been arranged and agreed. Finally, Condition 25 is imposed to ensure that adequate measures are in place to achieve at least 10% of the energy supply of the development being from renewable or low-carbon energy sources.
133. I have had regard to all other matters raised, including the points put forward in opposition to the proposal by Great Missenden Parish Council and the Great Missenden Village Association, but they are not sufficient to outweigh the considerations which have led me to conclude that this appeal should be allowed.

*David Wildsmith*

**INSPECTOR**

**Schedule of conditions (25 in total)**

- 1) The development hereby permitted shall be begun before the expiration of 3 years from the date of this permission.
- 2) The development hereby permitted shall be carried out in strict accordance with the following approved plans:

22842B/509-C, 511-C, 515-C, 10-B, 100-B, 51-B, 60-A, 61-A, 65-B, 66-A, 16-095-LS A, 16-095-EL-1 A, 16-095-EL-2 A, 16-095-EL-3 A, 16-095-EL-4 A, 16-095-EL-5 A, 16-095-EL-6-7 A, 16-095-FP-5 A, TCP A, 200-A, 201-A, 202-A, 250-A, 251-B, 252-B, 253-B, 254-B, 501-A, 502-B, 503-B, 504-A, 505-B, 506-B, 508-B, 512-B, 514-B and 516-B.
- 3) No development shall take place, including any works of demolition, until a Demolition & Construction Method Statement has been submitted to and approved in writing by the local planning authority. The approved statement shall be adhered to throughout the demolition and construction period. The Statement shall provide for:
  - i. The parking of vehicles of site operatives and visitors;
  - ii. The phasing of the development;
  - iii. The construction access;
  - iv. Delivery, loading and unloading arrangements for plant and materials within the site including management and timing of deliveries;
  - v. Routing of construction traffic;
  - vi. A condition survey of the surrounding highway network; limiting the survey to 50 metres to the north-west and 50 metres to the south-east from the Old Red Lion access point on High Street;
  - vii. Storage of plant and materials used in constructing the development;
  - viii. The erection and maintenance of security hoarding;
  - ix. Measures to control the emission of dust and dirt including the prevention of the deposit of mud and debris on the adjacent highway during demolition and construction phases;
  - x. Measures to mitigate against noise/vibration nuisance during both demolition and construction phases;
  - xi. Measures to mitigate against light nuisance during both demolition and construction phases;
  - xii. A scheme for recycling/disposing of waste (with particular reference to any hazardous materials such as asbestos) resulting from demolition and construction works.

Thereafter, the works shall be carried out in accordance with the approved details.
- 4) No development shall take place until a Tree Protection Plan has been submitted to and approved in writing by the local planning authority. This plan shall clearly show the trees and hedges to be retained and those to be removed, along with the positions of tree protection fencing. Before any other site works commence on the development hereby permitted this tree protection fencing shall be erected around all the trees and hedges to be retained in accordance with both this plan and British Standard 5837:2012. The fencing shall then be retained in these positions until the development is completed. Within these enclosed areas

there shall be no construction works, no storage of materials, no fires and no excavation or changes to ground levels.

- 5) No development shall take place until an arboricultural method statement has been submitted to and approved in writing by the local planning authority, which shall detail all work within the root protection areas of the retained trees. This statement shall include details of protection measures for the trees during the development, and information about any excavation work, any changes in existing ground levels and any changes in surface treatments within the root protection areas of the trees, including plans and cross-sections where necessary. The work shall then be carried out in accordance with this approved method statement.
- 6) Prior to the commencement of development approved by this planning permission (or such other date or stage in development as may be agreed in writing with the local planning authority), the following components of a scheme to deal with the risks associated with contamination of the site shall each be submitted to and approved, in writing, by the local planning authority:
  - i. A site investigation scheme, to provide information for a detailed assessment of the risk to all receptors that may be affected, including those off site. This should include an assessment of the potential risks to: human health, property (existing or proposed) including buildings, crops, pests, woodland and service lines and pipes, adjoining land, ground waters and surface waters, ecological systems, archaeological sites and ancient monuments;
  - ii. The site investigation results and the detailed risk assessment (ii) and, based on these, an options appraisal and remediation strategy giving full details of the remediation measures required and how they are to be undertaken;
  - iii. A verification plan providing details of the data that will be collected in order to demonstrate that the works set out in (ii) are complete and identifying any requirements for longer term monitoring of pollutant linkages, maintenance and arrangements for contingency action. Any changes to these components require the express consent of the local planning authority. The scheme shall be implemented as approved.
- 7) Reporting of Unexpected Contamination: In the event that contamination is found at any time when carrying out the approved development that was not previously identified it must be reported in writing immediately to the local planning authority. An investigation and risk assessment must be undertaken in accordance with the requirements of condition 6, and where remediation is necessary a remediation scheme must be prepared in accordance with the requirements of condition 6, which is subject to the approval in writing of the local planning authority. Following completion of measures identified in the approved remediation scheme a verification report must be prepared, which is subject to the approval in writing of the local planning authority in accordance with condition 6.
- 8) A Landscape and Ecological Management Plan (LEMP) shall be submitted to, and be approved in writing by the local planning authority prior to the commencement of the development. The content of the LEMP shall include the following:
  - i. Further detail relating to the proposed mitigation, compensation and enhancement actions for the scheme;

- ii. Description and evaluation of features and habitats to be designed and managed (bat features will ideally be built into the development structures);
- iii. Ecological trends and constraints on site that might influence management;
- iv. Aims and objectives of management;
- v. Appropriate management options for achieving aims and objectives (see below);
- vi. Prescriptions for management actions;
- vii. Preparation of a work schedule (including an annual work plan capable of being rolled forward over a 5 year period);
- viii. Details of the body or organisation responsible for implementation of the plan;
- ix. Ongoing monitoring and remedial measures.

The LEMP shall also include details of the legal and funding mechanism(s) by which the long-term implementation of the plan will be secured by the developer with the management body(ies) responsible for its delivery. The plan shall also set out (where the results from monitoring show that conservation aims and objectives of the LEMP are not being met) how contingencies and/or remedial action will be identified, agreed and implemented so that the development still delivers the fully functioning biodiversity objectives of the originally approved scheme. The approved plan will be implemented in accordance with the approved details.

- 9) No development shall take place until samples/details of the materials proposed to be used on the external surfaces of the development have been submitted to and approved in writing by the local planning authority. The development shall be carried out using the approved materials.
- 10) No work permitted by this permission shall be carried out until a detailed specification or working drawings/sections (scale 1:20, 1:10, 1:5, half or full size etc) fully detailing the new dormer windows, windows, eaves, extract vents, roof lights, flat roofs and porches have been submitted to and approved in writing by the local planning authority. The development shall be carried out using the approved specification and retained thereafter.
- 11) No development shall take place until details of the proposed slab levels of the buildings in relation to the existing and proposed levels of the site and the surrounding land have been submitted to and approved in writing by the local planning authority, with reference to a fixed datum point. The buildings shall be constructed with the approved slab levels.
- 12) Prior to occupation of the development a Travel Plan Statement shall be submitted to and agreed in writing by the local planning authority. The approved Travel Plan Statement shall be implemented upon first occupation of the development.
- 13) No development shall take place until a Delivery & Servicing Plan, detailing how the residential units within the development are to be serviced, has been submitted to and approved in writing by the local planning authority. The Delivery & Servicing Plan shall be implemented as approved, and shall remain in force as long as the development is occupied.
- 14) The development shall not commence until details of the internal private access roads, including any lighting, have been approved in writing by the local planning

authority and no dwelling shall be occupied until the access roads have been laid out and constructed in accordance with the approved details.

- 15) No development shall take place until a scheme to protect the front corner of 64 High Street from likely damage by vehicles has been submitted to and approved in writing by the local planning authority. The scheme shall be implemented as approved and retained for as long as the development is occupied.
- 16) No development shall take place until full details of soft landscape works have been submitted to and approved in writing by the local planning authority. These details shall include trees to be retained showing their species, spread and maturity and include planting plans, written specifications (including cultivation and other operations associated with plant and grass establishment); schedules of plants, noting species, plant sizes and proposed numbers/densities. These works shall be carried out as approved within the first planting season following the first occupation of the development or the completion of the development whichever is the sooner.
- 17) Any tree or shrub which forms part of the approved landscaping scheme which within a period of 5 years from planting fails to become established, becomes seriously damaged or diseased, dies or for any reason is removed shall be replaced in the next planting season by a tree or shrub of a species, size and maturity to be approved by the local planning authority.
- 18) No development shall take place until details of all screen and boundary walls, fences and any other means of enclosure have been submitted to and approved in writing by the local planning authority. The development shall thereafter only be carried out in accordance with the approved details and the buildings hereby approved shall not be occupied until the details have been fully implemented.
- 19) Notwithstanding the provisions of Article 3(1) of the Town & Country Planning (General Permitted Development) (England) Order 2015 (or any Order revoking or re-enacting that Order) no development falling within Classes A–E inclusive of Part 1 of Schedule 2 to the said Order shall be erected, constructed, or placed within the application site unless planning permission is first granted by the local planning authority.
- 20) The areas for parking, garaging and manoeuvring and the loading and unloading of vehicles shown on the submitted plans shall be laid out prior to the initial occupation of the development hereby permitted and those areas shall be reserved for parking for occupiers and not be used for any other purpose. 50 of the car ports and car parking spaces hereby permitted shall be reserved for the parking of vehicles for occupiers of and visitors to the approved residential development, and for the occupiers of Forge Cottage only and shall not be used for any other purpose; and 1 space, hereby permitted, shall be reserved for the parking of the users of the ground floor of the Old Red Lion and shall not be used for any other purpose.
- 21) The east-facing windows in the first floor of the apartment building Nos 26-30 shall be maintained with obscure glass and shall be at least 1.7 metres above the internal finished floor level. All bathroom and en-suite window(s) at first floor level in the dwellings hereby permitted shall be glazed and maintained with obscured glass and only the top part of the window(s) shall be capable of being opened.
- 22) Development shall not begin until a surface water drainage scheme for the site, based on sustainable drainage principles and an assessment of the hydrological

and hydro-geological context of the development, has been submitted to and approved in writing by the local planning authority. The scheme shall subsequently be implemented in accordance with the approved details before the development is occupied. The scheme shall also include:

- i. Details of the alternative drainage strategy which will be implemented;
  - ii. A demonstration that consideration has been given to water quality and the ecological and amenity benefits;
  - iii. Details of the existing and proposed discharge rates and volumes;
  - iv. Full construction details of all sustainable urban drainage system and drainage components;
  - v. Detailed drainage layout with pipe numbers, gradients and pipe sizes complete, together with storage volumes of all sustainable urban drainage system components;
  - vi. Calculations which demonstrate that the proposed drainage system can contain up to the 1 in 30 year storm event without flooding occurring and any onsite flooding between the 1 in 30 year and the 1 in 100 year plus climate change storm event, should be safely contained on site;
  - vii. Details of the proposed overland flood flow routes in the event of system exceedance or failure, with demonstration that such flows can be appropriately managed on site without increasing flood risk to occupants, or to the adjacent or the downstream sites;
  - viii. Details of Flow depth;
  - ix. Details of Flow volume;
  - x. Details of Flow velocity;
  - xi. Details of Flow direction.
- 23) If the road is to be adopted, the developer will agree to enter into a deed of easement pursuant to Section 38 of the Highways Act 1980 to allow the highway authority to access the sustainable urban drainage system to preserve the integrity of the highways system, for the purpose of emergency repair and maintenance.
- 24) Prior to the first occupation of the development, a verification report carried out by a qualified drainage engineer must be submitted to and approved in writing by the local planning authority to demonstrate that the sustainable urban drainage system has been constructed in accordance with the agreed scheme.
- 25) No development shall take place until details of the measures to provide at least 10% of the energy supply of the development from renewable or low-carbon energy sources, including details of physical works on site, have been submitted to and approved in writing by the local planning authority. The renewable energy equipment shall then be installed in accordance with the approved details prior to the first occupation of any part of the development hereby permitted and shall thereafter remain operational at all times.

**APPEARANCES****FOR THE COUNCIL**

Leanne Buckley-Thomson of Counsel	instructed by Ranjit Bharj, Chiltern and South Bucks District Councils (CSBDC) Joint Legal Services
<b>She called:</b>	
Mr Balal Farooqi	Policy and Efficiency Officer, Joint Waste Team, CSBDC
Mr Tim Thurley BEng(Hons) MIHE	Highways Development Management Consultant, Buckinghamshire County Council (BCC)
Mrs Julia Foster BA(Hons) PGDip Town Planning PGDip Historic Building Conservation AA IHBC MRTPI	District Historic Buildings Officer, CSBDC
Mr Stephen Chainani MSc	School Place Planning Commissioning Partner, Children and Young People Division, BCC
Mr Michael Veryard	Housing Manager, Joint Housing Team, CSBDC
Mr Graham Winwright BA(Hons) MRTPI	Planning Policy and Economic Development Manager, CSBDC
Mrs Margaret Smith BA(Hons) MRTPI	Principal Planning Officer, Development Management, CSBDC
Mr Stuart Morley BSc MA DipTP FRICS	Bespoke Property Consultants

**FOR THE APPELLANT**

Reuben Taylor QC	instructed by Icen Projects Ltd
<b>He called:</b>	
Mr Laurie Handcock MA MSc MHBC	Director, Heritage Team, Icen Projects
Mr Richard Fitter IEng FCILT FICE FIHE	Director, Entran Ltd
Mr David van der Lande BSc(Hons) MRICS	Director, Icen Projects
Mrs Katie Inglis BRTP MDS	Associate, Icen Projects

**INTERESTED PERSONS OPPOSING THE PROPOSAL**

Mr Michael Wintgens	Local resident
Mr Paul Tompson	Local resident
Mrs Anne Kaneko	Local resident, speaking on behalf of Great Missenden Village Association
Mrs Christine Baxter	Chair of Planning, Great Missenden Parish Council, on behalf of the Parish Council
